

ABSTRACT

An underfloor storage structure for a vehicle comprises a floor panel (5) which includes a concave portion as a storage space (6), and which partially covers a port (7) of the storage space, a rotatable tray (36) disposed in the storage space (6), and at least one lid (8) for selectively closing the remaining portion of the port (7) of the storage space (6). A passenger seated in one of seats (2, 3) of the vehicle can freely and easily access pieces of luggage stored in the storage space (6) by rotating the rotatable tray (36).
